ward buckley dr-willis: sorry I wasnt clear pr0xy, ##hardware rjyoung: i dont know what the issue is. rjyoung: is that a gui program you are running? yes hello its lxde running in ubuntu server 13.10 Can someone tell me what exactly that power button is on the keyboard in Ubuntu on my desktop it works fine I have acpi disabled in bios praj: shutdown & reboot? right but I can't see the power button on the keyboard praj: i would think the shutdown & reboot is a button you can press on your keyboard Yeah I have the keyboard set to US and for USA it is on the right side of the keyboard praj, control + alt + print too late he's gone bazhang: no body can escape from real help :p bazhang, yeah but when I shutdown it's not an option on the power button on the keyboard lotuspsychje, a distro issue? I have acpi disabled so ubuntu isn't even detecting that option on the keyboard does someone know if ubuntu is detecting the power button at all on the keyboard? praj: didnt you say you wanted to hibernate? lotuspsychje, hibernate is disabled by default so I think I can't use that option on the keyboard on acpi praj: maybe a keyboard button to bring you back to bios settings? yeah but the power button on my keyboard works for powering off and on too praj: i dont know your mobo, but what i would do is 82157476af
